Amendments to the Claims:

1. (Previously Presented) A method of treating or preventing pain and inflammatory processes and diseases in a member of the species *Canis familiaris* in need of such treatment, while at the same time reducing or eliminating undesirable side effects by selectively inhibiting COX-2 activity with reference to COX-1 activity, wherein the selectivity ratio of COX-2 : COX-1 activity inhibition is at least 3 : 1 based on *ex vivo* inhibition levels in whole blood measured at a dose giving $\geq 80\%$ COX-2 inhibition, comprising administering to said member of the species *Canis familiaris* an amount therapeutically effective for treating pain and inflammation in accordance with the above-recited limitations, of an anti-inflammatory selective COX-2 inhibitory compound comprising a compound of the formula:

Formula (I)

wherein:

- where A is hydroxy, (C₁ - C₄)alkoxy, amino, hydroxyamino, mono-(C₁-C₂)alkylamino, di-(C₁-C₂)alkylamino; X and Y are independently H or (C₁ - C₂)alkyl; and n is 1 or 2;
R¹ is halogen, (C₁ - C₃)alkyl, trifluoromethyl, or nitro;
R³ is H; (C₁ - C₂)alkyl; phenyl or phenyl-(C₁ - C₂)alkyl, where phenyl is optionally mono-substituted by fluoro or chloro; -C(=O)-R, where R is (C₁ - C₂)alkyl or phenyl, optionally mono-substituted by fluoro or chloro; or -C(=O)-O-R¹, where R¹ is (C₁ - C₂)alkyl;

- where X and Y are different, the (-)(R) and (+)(S) enantiomers thereof; and all pharmaceutically acceptable salt forms, prodrugs and metabolites thereof which are therapeutically active for treating or preventing pain and inflammation, with the proviso that the compound is not 6-chloro- α -methyl-9H-carbazole-2-acetic acid.
